

SHOCKWAVE THERAPY

An **efficient, permanent,**
and **non-invasive**
alternative to surgery

Shockwave therapy can offer
effective pain relief for:

- *Tennis elbow*
- *Runner's knee*
- *Shoulder pain*
- *Calcifications*

How does it work?

Shockwave therapy administers **high dosages of energy** to painful, problematic areas to trigger **tissue healing and regeneration**.

What does it feel like?

A **sensation of pressure** will be felt over the targeted area during therapy. The treatment is generally tolerated well and can be adjusted to suit individuals needs.

Source: BTL Group of Companies (2019).

How fast will I see results?

Pain relief can be felt after the **first session** and the healing process continues for several weeks after treatment. A treatment plan will be created to address your specific needs, but a typical treatment can be completed within **5-10 short sessions, 1-2 times/week**.

Before

After Shockwave

Frozen shoulder injury after 3rd treatment.
